

Fayetteville State University
College of Arts and Sciences
Department of Mathematics and Computer Science
CSC 220.D1 – Data Structures and Algorithms
Fall 2009

I. Locator Information

Instructor: Dr. Michael Almeida

Course # and Name: CSC 220 – Data Structures and Algorithms

Day and Time Class Meets: online

Room: online

Semester Credit Hours: 3

Office Hours: M 2:00–5:00; W 12:00–2:00;

Office Location: 340 SBE

TR 11:00-12:30

Office Phone: 672-1161

Email address: malmeida@uncfsu.edu

Total Contact Hours for Class: 45

FSU Policy on Electronic Mail: Fayetteville State University provides to each student, free of charge, an electronic mail account (username@uncfsu.edu) that is easily accessible via the Internet. The university has established FSU email as the primary mode of correspondence between university officials and enrolled students. Inquiries and requests from students pertaining to academic records, grades, bills, financial aid, and other matters of a confidential nature must be submitted via FSU email. Inquiries or requests from personal email accounts are not assured a response. The university maintains open-use computer laboratories throughout the campus that can be used to access electronic mail.

Rules and regulations governing the use of FSU email may be found at
<http://www.uncfsu.edu/PDFs/EmailPolicyFinal.pdf>

II. Course Description

This course explores data structures from various viewpoints: data structure design in response to a specific need, the expression of an algorithm in terms of the operations on the data structure, and complexity of operations. This course reinforces the knowledge of data structures gained in CSC130 and extends it, particularly with regard to complexity of corresponding algorithms.

Prerequisites: Grade of “C” or better in CSC 130 and MATH 150.

III. Disabled Student Services

In accordance with Section 504 of the 1973 Rehabilitation Act and the Americans with Disabilities Act (ACA) of 1990, if you have a disability or think you have a disability to please contact the Center for Personal Development in the Spaulding Building, Room 155 (1st Floor); 910-672-1203.

IV. Textbook

Peter Drake. *Data Structures and Algorithms in Java*. ISBN: 0-13-146914-2.
Pearson Prentice Hall, 2006.

New and used copies of the textbook are available at the bookstore and on the internet.

You will also need access to a recent version of Java and an IDE. These are widely available in the computer labs on campus, but you can download and install free copies on your own machines from the following websites:

For Java SE JDK 6 Update 10: <http://java.sun.com/javase/downloads/index.jsp>

For JCreator IDE (LE Version): <http://www.jcreator.com/download.htm>

V. Student Learning Outcomes

Upon completion of this course, students will be able to:

1. understand and use inheritance;
2. implement abstract data types using arrays, arraylists and linked lists;
3. implement and use stacks, queues and dequeues;
4. implement and use lists and trees;
5. implement and use priority queues;
6. understand and user interfaces;
7. understand and use abstract classes;
8. perform complexity analysis on algorithms;
9. write recursive procedures.

VI. Course Requirements and Evaluation Criteria

a. Final grades are assigned as follows:

A: 90-100

B: 80-89

C: 70-79

D: 60-69

F: < 60

- b. Attendance Requirements – Students are expected to attend class regularly, and keep up with the readings and the assignments.
- c. The course grade is based on: 5 programming projects (10% each) + 2 written exercises (5% each) + midterm exam (20%) + final exam (20%)
- d. Policy on Late Assignments - Each assignment must be submitted on time. Up to ten (10) percent of your assignment mark will be deducted for each school day the assignment is overdue. If you need to hand in an assignment late, please notify me ahead of time.
- e. Dishonesty on graded assignments will not be tolerated. Although students may discuss assignments with each another, they must neither give nor receive excessive help. Students learn by doing things themselves. Having access to another student's work on the system is definitely not allowed. Duplicate answers are not acceptable. Each student is responsible for disposing of printouts safely (Do NOT simply throw away printouts in a trash can where they can easily be retrieved by another person.) and for protecting their home directory. All students involved in dishonesty (those giving as well as those receiving unallowable help) will be penalized.

Please note: If these evaluation criteria must be revised because of extraordinary circumstances, the instructor will distribute a written amendment to the syllabus.

VII. Academic Support Resources – none for this course.

VIII. Course Outline and Assignment Schedule*

week #	start date	topics	assignments	events
1	17-Aug	Ch.1 Encapsulation	Download & install Java & JCreator	Classes start 8/20
2	24-Aug	Ch.2 Polymorphism	Project #1	
3	31-Aug	Ch.3 Inheritance		
4	7-Sep	Ch.4 Stacks & Queues	Project #2	Monday holiday 9/7

5	14-Sep	Ch.4 Stacks & Queues		Fall Convocation 9/15 2:15 – 3:30
6	21-Sep	Ch.5 Array-Based Structures	Project #3	
7	28-Sep	Ch.6 Linked Structures		
8	5-Oct		Midterm Exam assigned	Midterms start 10/8
9	12-Oct	Ch.7 Analysis of Algorithms	Midterm Exam due	Fall Break 10/15-16
10	19-Oct	Ch.7 Analysis of Algorithms	Exercise #1	
11	26-Oct	Ch.8 Searching & Sorting	Project #4	
12	2-Nov	Ch.9 Recursion Ch.10 Trees	Exercise #2	
13	9-Nov	Ch.11 Sets	Project #5	Holiday 11/11
14	16-Nov	Ch.11 Sets		
15	23-Nov	Ch. 15 Graphs		Holiday 11/26-27
16	30-Nov	Ch. 15 Graphs	Final Exam assigned	Classes end 12/4
17	7-Dec		Final Exam due	

* This schedule is subject to change for the optimum benefit of the class as a whole. Therefore it is important to stay alert, read your email and read the discussion boards regularly.

IX. Teaching Strategies

The primary teaching strategies for this course will be Blackboard notes, textbook readings, online discussions, written exercises and programming projects.
